

Enable and secure your mobile workforce with the power of AI

EndPoint Secure Managed Service uses the IBM unified endpoint management (UEM) platform that transforms the way that organizations support users, apps, content, and data across every type of device. EndPoint Secure Managed Service uses an open, cloud-based platform which integrates with preferred security and productivity tools, allowing modern business leaders to derive immediate value.

Wide-ranging AI capabilities

The only UEM platform that leverages AI to deliver contextually relevant security insights **for administrators and end users** – enabling them to be **more productive across the entire enterprise**.

Best-in-class SaaS

Speed up time-to-value with the industry-leading cloud-based approach to UEM. Its open platform **enables extensive integrations with your existing infrastructure and apps from leading technology vendors**.

Threat detection and response

Going by the stats, at least one of your devices is currently infected or compromised. EndPoint Secure's enterprise-grade service pack's threat defense can detect and automate remediation **on your network and across all your apps and devices**.

Digital trust across all devices

Knowing how employees are using their devices and apps is a direct path to business transformation. Deliver a frictionless pathway to user productivity, and **keep their devices, data, and apps secure with built-in identity and access management (IAM)**.

Criminals attack the weakest link to hack sensitive Data

EndPoint Secure Managed Service

Backed by IBM's industry-leading security ecosystem, EndPoint Secure Managed Service is a collection of UEM Service offerings that help IT and Security leaders consistently manage and secure apps, content, and data for users across all endpoint types.

Essentials Service Pack Features
