

# Smart Factory

Bringing smart factories to life!

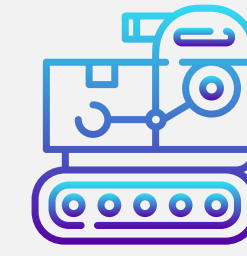

**Predictive Maintenance**

**Automated Inventory and Asset Tracking**

**Autonomous Warehouse Operations**

**RPA (Robotics Process Automation)**

**Supply Chain Automation**

**Work Safe. Work Smart**

## Putting intelligence at the heart of manufacturing

Manufacturing is undergoing a makeover. Advance technologies like AI, IoT and Machine Learning are spearheading the next phase of digitization in manufacturing. Futurism is committed to creating smart digital journeys for its clients.

### Predictive Maintenance:

Digitization of critical operations and use of smart sensors on equipment to facilitate remote monitoring and predictive maintenance.

### Automated Inventory & Asset Tracking:

Advanced sensors to track raw-materials along with intelligent analytic.

### Autonomous Warehouse Operations:

Augmented reality to help technicians with pick-and-place tasks and remote monitoring/upkeep of equipment.

### RPA:

Connecting equipment across your manufacturing unit to automate operations, predict problems, drive uptime, tame human errors, and improve workers' safety.

### Supply Chain Automation:

Create highly optimized supply chain model using AI and Blockchain to facilitate efficient SCM and reduce disruptions.

### Work Safe, Work Smart:

Predict workplace mishaps in real time, with connected wearables and sensors by leveraging the power of IoT.

**THE SMART  
FACTORY  
FUTURE IS  
NOW!**
