

Robotic Process Automation (RPA) Services

Cut processing costs by up to 80% with RPA. .

A good number of businesses are embracing next-gen technologies like AI, IoT, Machine Learning and other to reduce Total Cost of Ownership (TCO), drive organizational efficiency, tame human errors and amplify brand value.

Robotic Process Automation or RPA is one such new age technology that facilitates organizations to create and deploy a virtual workforce, which in turn helps to not only automate mundane and repetitive tasks, but also end-to-end business operations. The prime purpose of RPA is to handle cognitive activities to augment human capabilities.

RPA utilizes bots (robots) that replicate the manual work executed by humans. Once configured, these bots can understand specific processes and can automatically process data, trigger apt responses and communicate with other systems thus, freeing up workforce and saving time as well as costs.

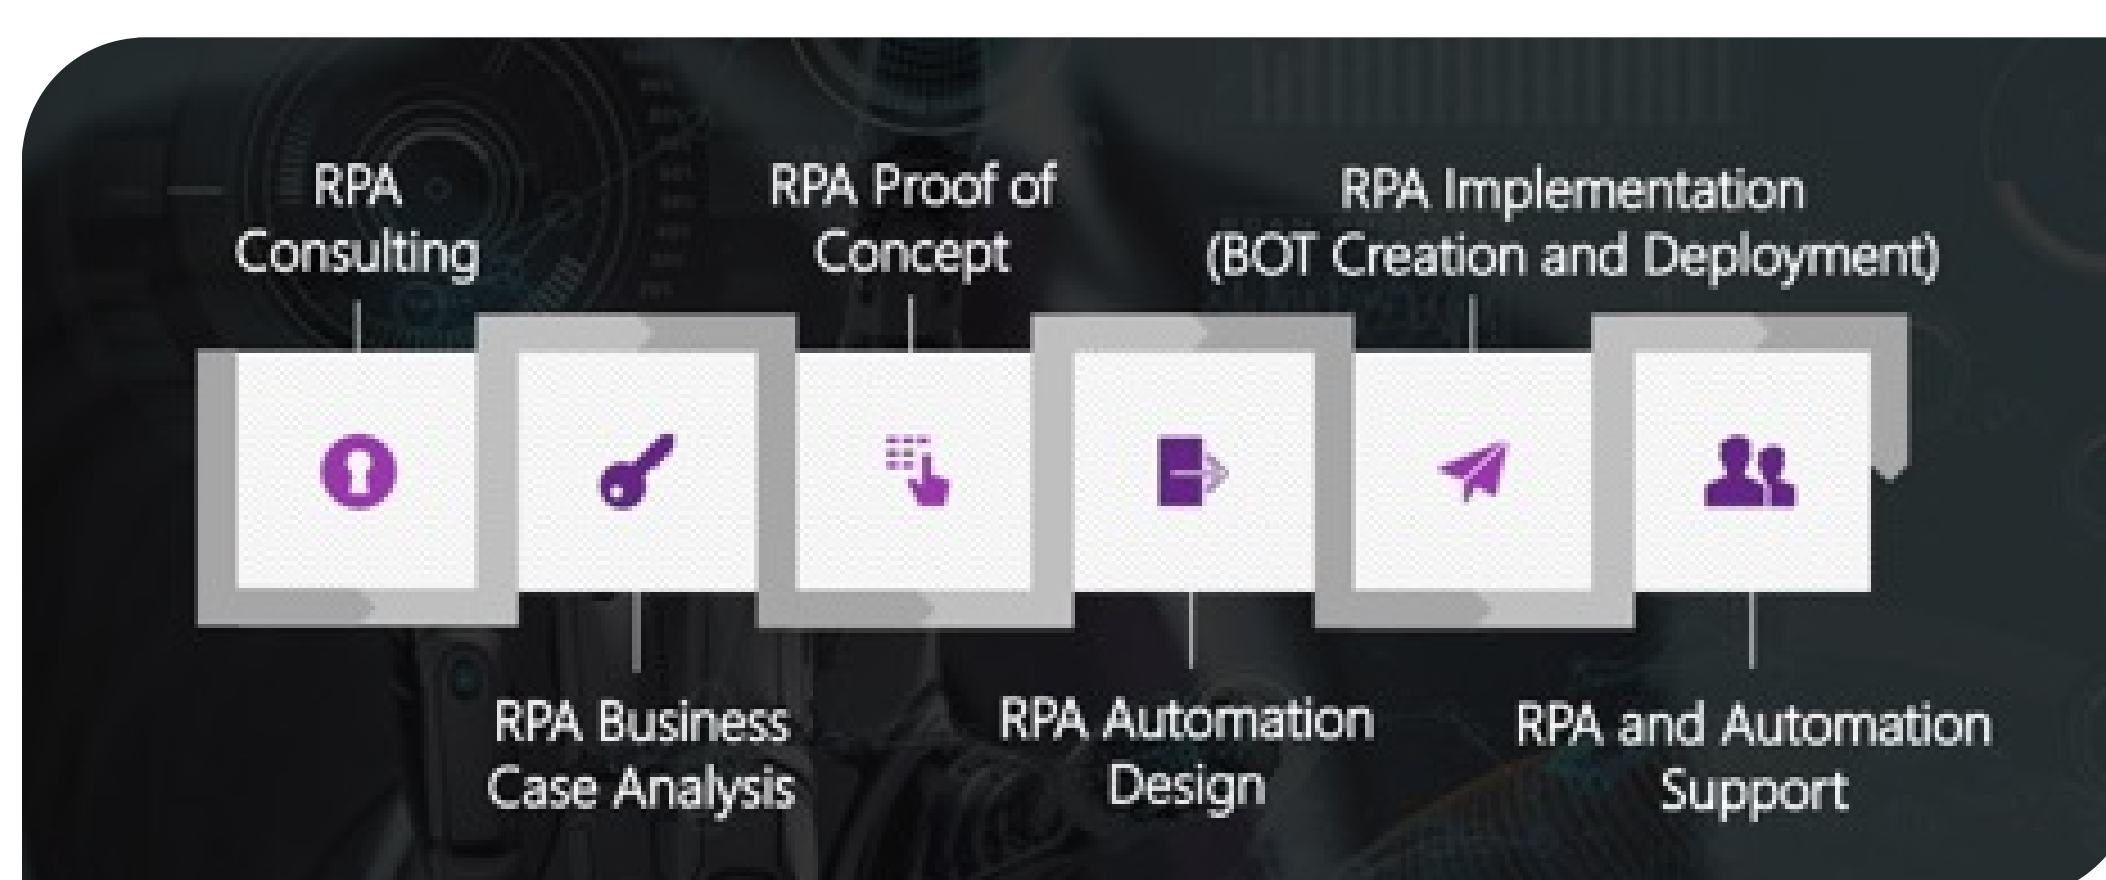

Did you know?

By 2024, RPA would help organizations cut operational costs by 30% (Gartner).

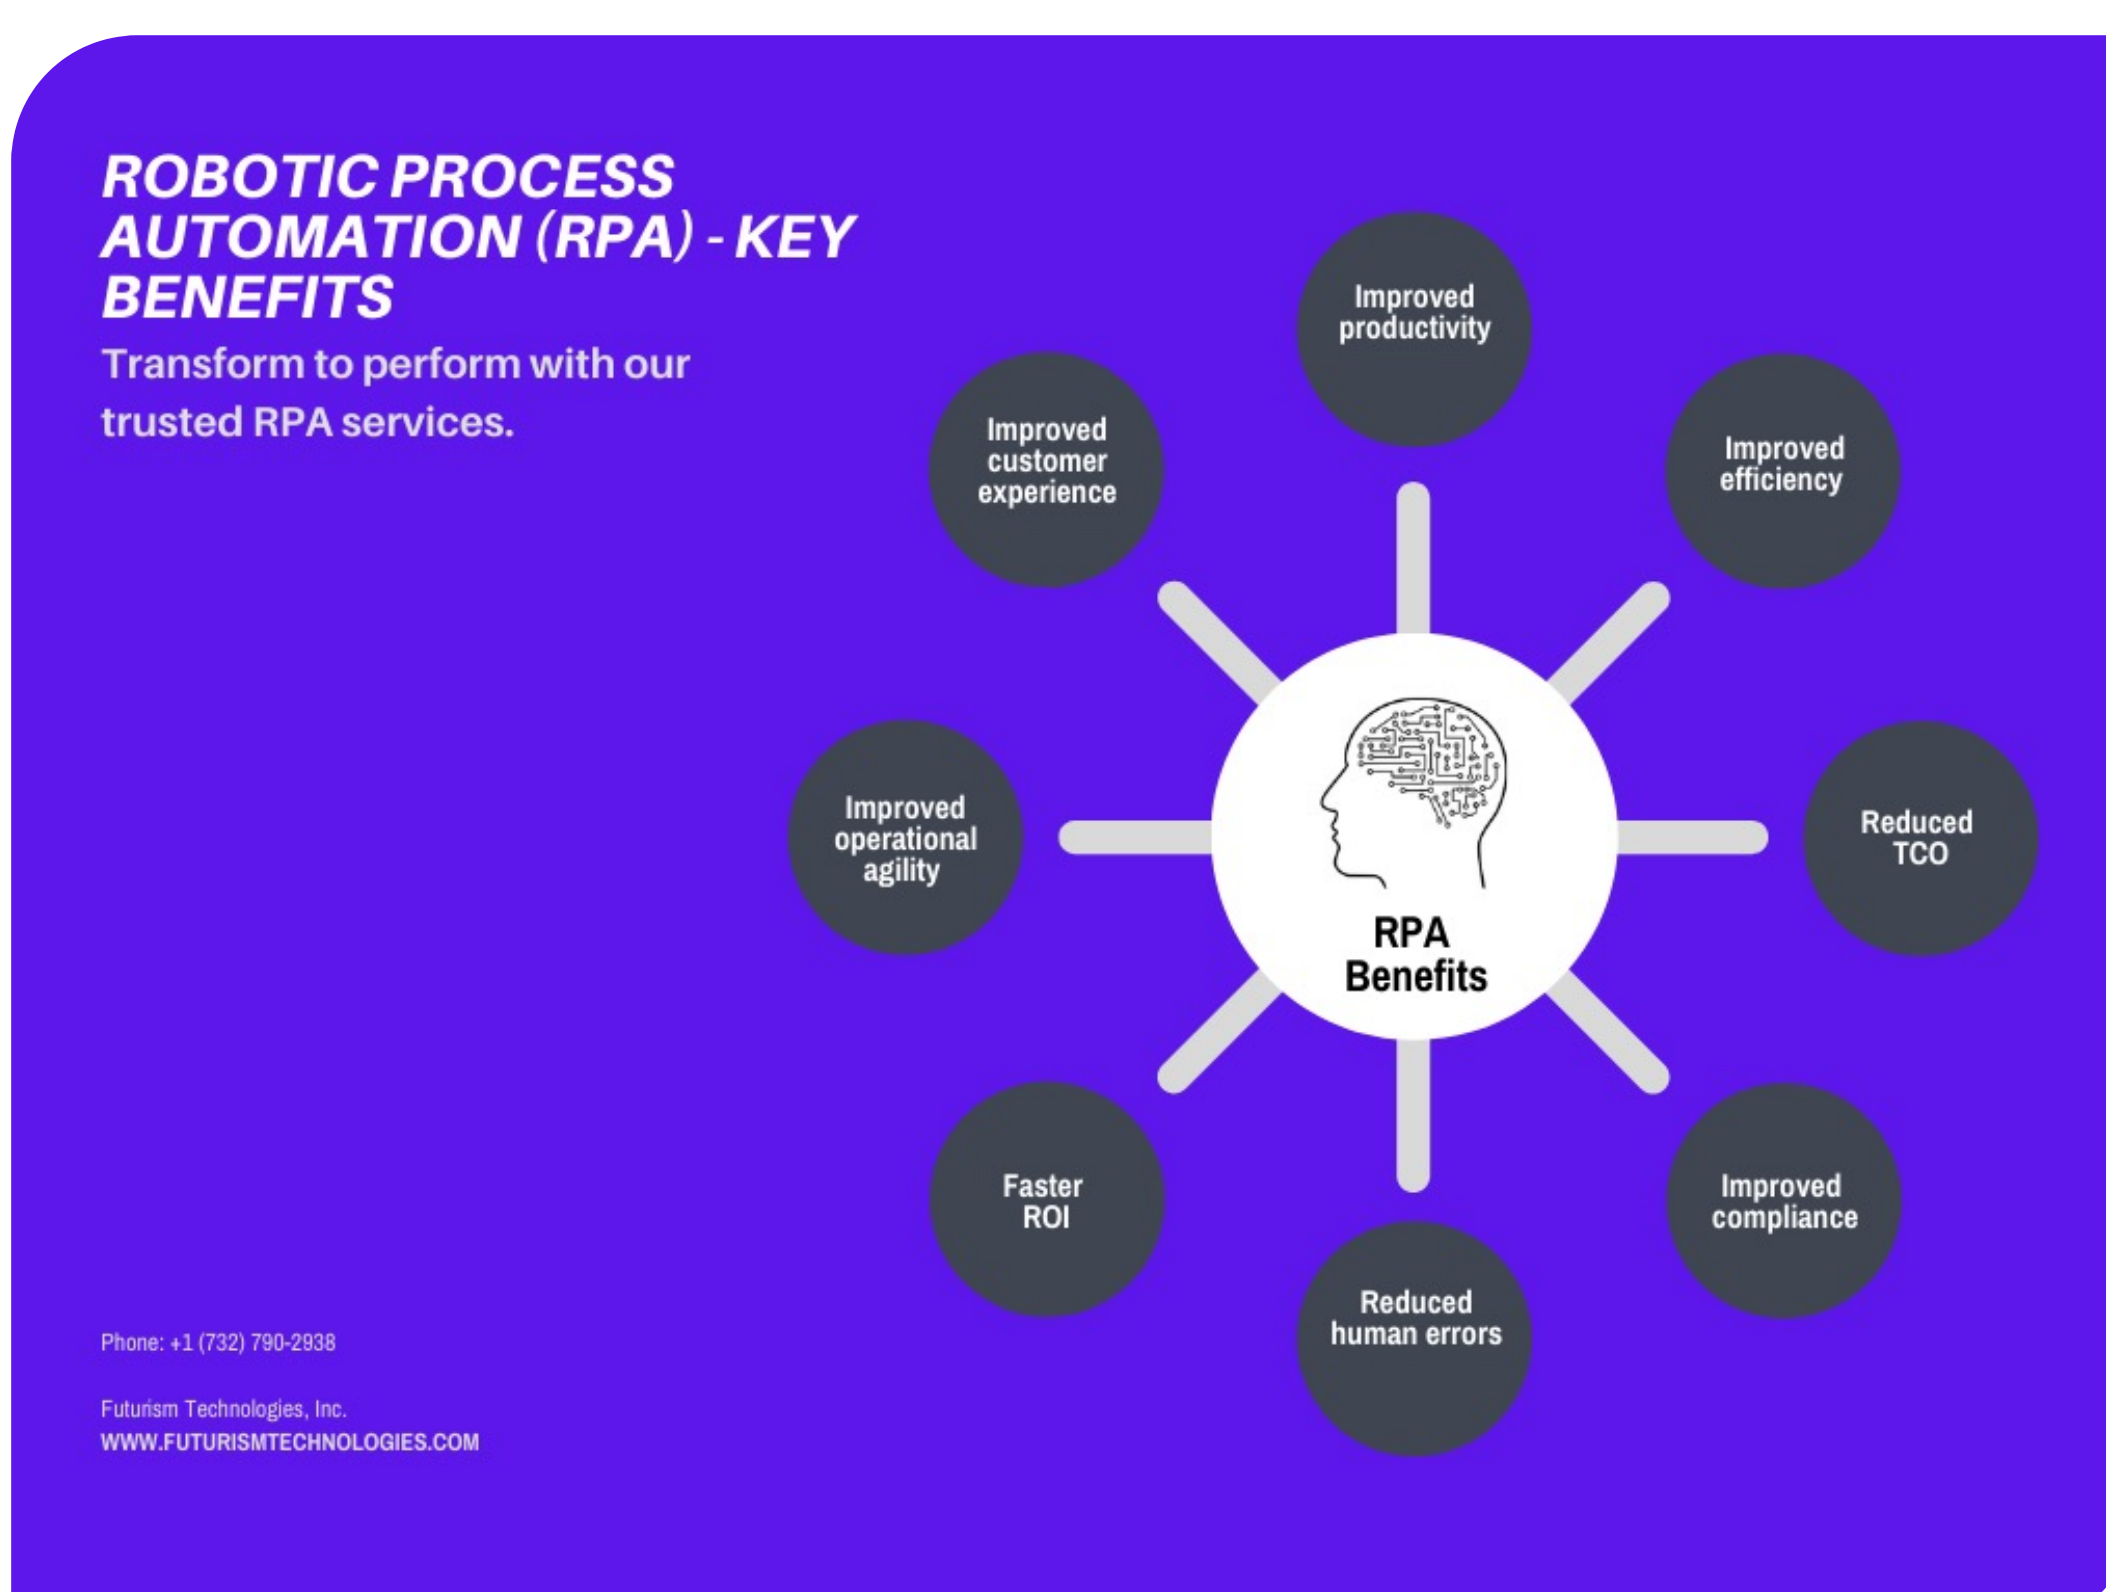

RPA will help you get that competitive edge.

Our RPA Services:

Enable responsive and scalable business processes for improved efficiency and better ROI with our RPA services.

- ✓ **RPA Consulting:** Enable responsive and scalable business processes for improved efficiency and better ROI with our RPA services.
- ✓ **RPA Business Case Analysis:** We help you analyze automation possibilities and choose the most apt RPA platform for your business that suits your existing IT infrastructure and systems. Business case analysis involves a detailed cost-and-efforts breakdown blueprint.
- ✓ **RPA Proof of Concept (POC):** RPA POC services involve building objectives for RPA proof of concept, framework and technical workflows to help design a tailored RPA solution that suits your business.
- ✓ **RPA Automation Design and Implementation:** Our automation experts will help you map all the manual processes that require automation and come up with a custom framework for implementation.
- ✓ **RPA and Automation Support:** End-to-end support and bot management assistance. Support also includes daily bot operations analysis to ensure continuous improvement as a part of our RPA Center of Excellence. Support also offers infrastructure governance and security, 24/7 support platform, process optimization and much more.

RPA tool expertise includes:

- UI PATH
- BLUE PRISM
- AUTOMATION ANYWHERE
