

Futurism EndPoint Secure : powered by IBM MaaS360 with Watson

Gain better visibility and control over all your endpoints with IBM MaaS360

Explore the power of “IBM MaaS360 with Watson” with “Futurism EndPoint Secure”, a Managed MDM/UEM Security Service offering from Futurism Technologies, IBM’s Global Security Solutions Business Partner.

Futurism EndPoint Secure leverages a Zero-Trust Security Framework using IBM MaaS360 with Watson AI bringing together a range of elements to help you manage apps, devices and content and offers unified endpoint management, AI-driven threat intelligence and insights, real-time reporting and context related security analytics.

IBM MaaS360 | With Watson

→ Did you know?

In a recent survey, 2/3rd of the organizations surveyed reported incidents of data breaches on mobile devices that provide access to sensitive company data.

In another survey, it was found that only half of these businesses had a robust mobile device management and security policy in place.

✓ Security Challenges:

Confronted with the challenges of dealing with an ever-increasing mobile workplace, businesses find it difficult to strike the right balance between empowering a mobile workforce and help them become more productive whilst safeguarding sensitive business information from potential threats. Also, many companies don’t have the staff and skills to manage policy and security on endpoints.

✓ This is where Futurism EndPoint Secure comes in!

Developed with IBM, EndPoint Secure is a unified endpoint management solution delivered as a managed security service. EndPoint Secure manages endpoint policies and security threats for all your company endpoints including desktops, mobile phones, tablets, wearables and IoT devices.

Futurism EndPoint Secure gives you better visibility and control of your devices and data. EndPoint Secure curbs the costs and complexities that accompany standalone mobile security solutions and require additional management infrastructure.

EndPoint Secure leverages IBM Watson technology and integrates multiple layers of data protection to safeguard your business information irrespective of wherever it sits or goes. We leverage a Zero-Trust Security Framework for encryption enforcement, password enforcement, and remote access/lock to secure your data round the clock.

✓ Our capabilities:

- ✓ Zero-Trust Security Framework (IBM MaaS360)
- ✓ Risk and threat analysis with IBM Watson cognitive technology and IBM X-Force threat intelligence
- ✓ Fully encrypted container to protect corporate data including email, web browsing and application data
- ✓ Mobile security index
- ✓ Identity and access management (IAM)
- ✓ Application management
- ✓ Detailed security settings on all your business owned devices
- ✓ Location tracking for device theft
- ✓ Remote security features (password enforcement, lock and wipe, etc.)
- ✓ Multiple devices and OS support (iOS, Android, Microsoft Windows devices and tablets, etc.)
- ✓ 24/7 Security Operations Centre
- ✓ Mobile application management (MAM) and mobile device management (MDM)
- ✓ Cloud identity management
- ✓ Real-time reporting and analytics
- ✓ Centralized management console for all your endpoints

Futurism EndPoint Secure

✓ Key Benefits

- ✓ Gain better control and visibility over all your endpoints including mobile devices, applications, documents, connected IoT devices
- ✓ Automate encryption and password enforcement
- ✓ On-demand remote access
- ✓ Reduced deployment, security and IT related costs
- ✓ Better compliance
- ✓ Full compliance (HIPAA, ISO 27001 Certified, FISMA, NIST, FedRAMP, and many more)
- ✓ Reduced OPEX with centralized control of all endpoints
- ✓ Centralized policy creation and enforcement ability across single
- ✓ Optimal device configuration and threat analysis
- ✓ Assured device protection powered by IBM Watson
- ✓ Unified console for centralized threat and data loss protection (DLP) management

Futurism EndPoint Secure is a next-gen managed security offering powered by IBM MaaS360 that uses a Zero-Trust Security approach aimed at delivering a competitive edge when it comes to endpoint security and mobile device management.
