Futurism Secure-Access: Managed Identity & Access Management Services Powered by 'IBM Verify Access'

Take full control of identity & access management with Futurism's IAM services powered by IBM Verify Access

Futurism Technologies is a leading IBM Global Security Solutions Partner assisting businesses around the world to embrace industry-leading IBM identity access management security tech with its proprietary and licensing cybersecurity service offering – ‘Futurism Secure-Access’, fully-managed identity & access management (IAM) services powered by IBM Verify Access. ‘Futurism Secure-Access’ is one among our trusted security portfolio offering that uses a Zero-Trust Framework to help enterprises with advanced access management and multi-factor authentication as they adopt new cloud, IoT, 5G, web and mobile technologies.

Futurism Secure-Access: What's in it for you?

Did you know?

More than 90% of organizations suffered an identity and access related breach in 2020-21.

Futurism Secure-Access helps organizations adopt ‘identity’ as the heart of a Zero-Trust Security approach to offer a secure and seamless experience for every user. Powered by IBM Verify Access, ‘Futurism Secure-Access’ offers a powerful, modular and intelligent IAM approach that leverages data-driven threat intel and analytics to decide who will access what through a strong risk-based authentication and AI.

Key Features

✓ Intelligent hybrid IAM & Zero-Trust approach

Futurism Secure-Access uses a Zero-Trust Framework to offer a novel IAM security approach that can effectively adapt to the complexities of a modern security infrastructure, embrace hybrid workplace environment and protect people, apps, devices and data wherever it goes or stays. Seamless and direct connection paves way for a hybrid-based IAM approach improving operational efficiency and business agility along with improved end-user productivity.

✓ Strong multi-factor authentication

Gain full control over critical assets including mobile. ‘Futurism Secure-Access’ helps you establish a powerful mobile multi-factor authentication allowing you to challenge, deny or accept mobile requests based on diverse risk factors such as IP reputation, geographic location, application data, etc.

✓ Identity federation

Securely integrate various third-party applications into existing infrastructure while offering your users with a seamless and single sign-on experience on mobiles and desktops. Link user’s identity across diverse identity management systems. Move quickly between systems without compromising on security.

✓ Enforce powerful authentication

Enforce powerful authentication that goes beyond password and username. Enable strong multi-factor authentication and/or challenge risk access requests with one-time email verification, knowledge based question or one-time passcode.

✓ Passwordless logins

Enable your employees to log into their work applications including Office 365 using passwordless verification that goes beyond typical credentials-based approach. Enable multi-factor authentication or challenge risky access requests with modern multi-factor authentication methods.

✓ Maintain balance between usability & security

‘Futurism Secure-Access’ helps you to establish strong identity federation, which in turn helps you securely integrate various third-party SaaS applications into existing infrastructure while offering your end-users with a seamless sign-on experience.

✓ Risk-based authentication powered by AI

Adopt and enforce powerful risk-based controls leveraging IBM Verify Access’ intelligent risk-scoring algorithm. Enforce context-aware authentication using data pertaining to your users, their session-based info and mobile devices without interfering with their session.

Why Futurism Secure-Access?

Developed with IBM, Futurism Secure-Access is a fully managed access management and network authorization/security policy management service offering that offers end-to-end protection to your assets over geographically dispersed extranets and intranets.

- Best-of-breed IAM service (IBM Verify Access)
- Zero-Trust approach
- Certified security resources with Global Presence
- Proprietary IAM security offering powered by IBM
- Better interoperability (zero vendor lock-in period) & low TCO
- Intelligent Hybrid IAM approach
- IBM Global Security Solutions Partner with 18+ years of expertise
- 24x7 threat protection & rapid threat response
- Real-time threat intel & analytics (IBM Verify Access)
- On-demand security audit capabilities
