

Futurism Smart Warehouse Management Solution

Take your warehouse operations to the next big level by leveraging the power of IoT

Ramp up your warehouse to perform smarter and streamline inventory operations while maximizing space and resource utilization.

Futurism's Smart Warehouse Management Solution enables real-time monitoring of warehouse equipment/assets by providing traceability and transparency of all the goods across various warehouse and storage locations. Get insightful analytics into inventory/storage and better visibility into the stock. Prevent inventory discrepancies and improve workers' safety.

Indoor Asset Tracking

Futurism smart warehouse management helps to organize storage in an intuitive way so that it is convenient to align freight lots according to their location. This ensures storage optimization and efficient operation of the warehouse terminal saving both costs as well as time.

✓ Key Challenges

Features

Next-gen Warehouse Management Solution designed to help organizations automate all inventory-related operations. Enable warehouse managers to achieve improved profitability, accuracy and performance along with support for fleet management for improved logistics.

Smart Warehouse Management

- ✓ Manage goods' journey from quality control to pick-up and storage to retrieval
- ✓ Track inventory location in real-time
- ✓ Manage warehouse operations with least human interference
- ✓ Centralize warehouse operations data
- ✓ Improve stock replenishment, order fulfillment rates and workers' safety

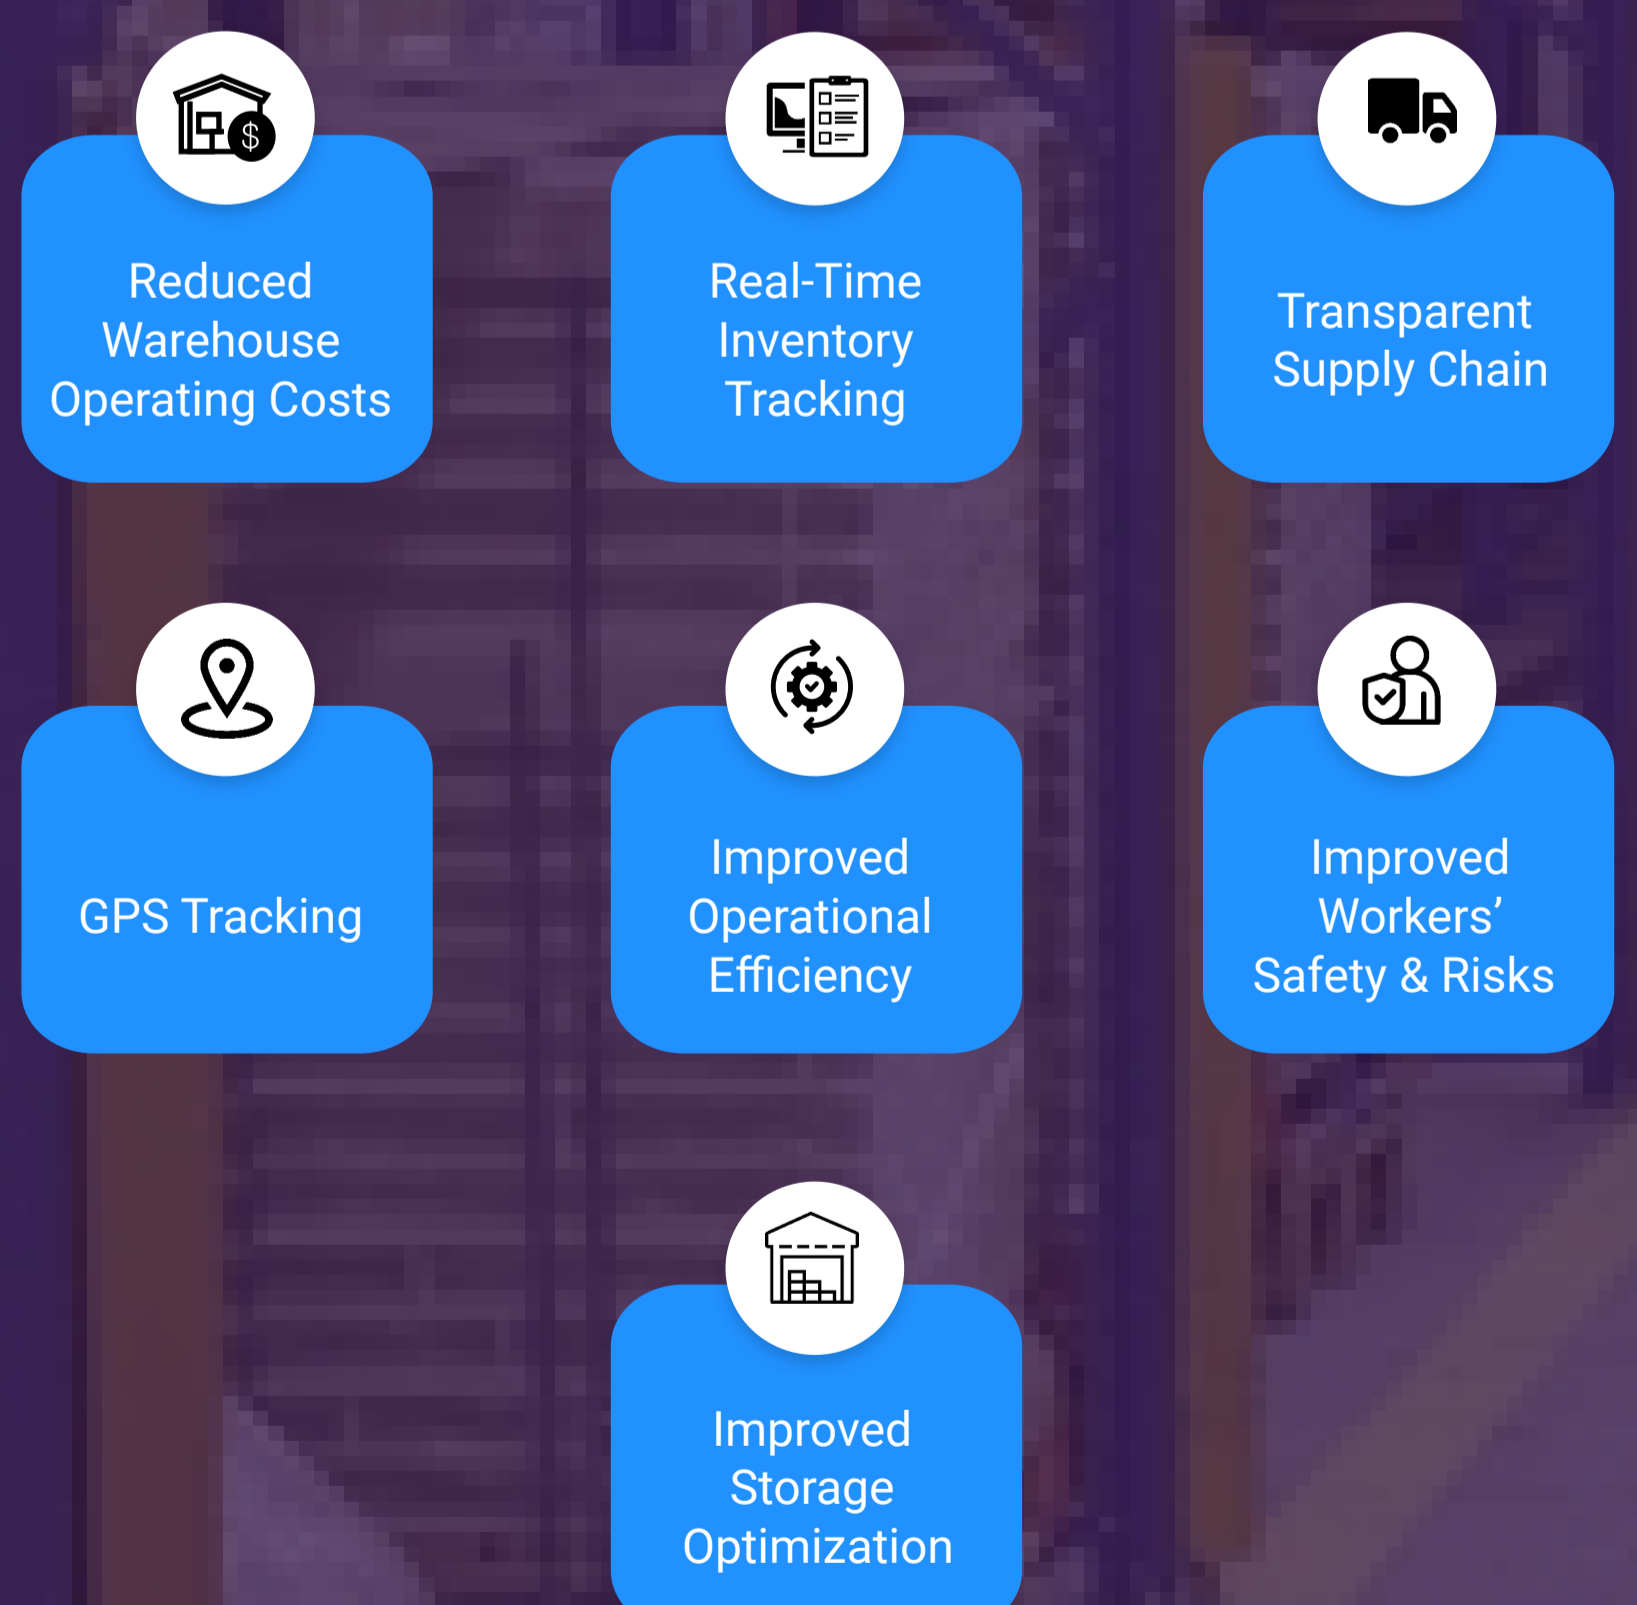

Smart Warehouse Pallet Monitoring & Tracing

- ✓ Monitor pallet movements across the warehouse
- ✓ Automate data entry process of pallets from warehouse
- ✓ Track exact location of misplaced or lost pallets
- ✓ Identify pallets moving in wrong direction or placed in a wrong location
- ✓ Get automated alerts in the event of unusual pallet movements

Smart Storage Area Monitoring

- ✓ Preserve perishable food items, process chemicals, unfinished materials, etc. with smart storage monitoring
- ✓ Monitor inventory's physical condition to prevent damages
- ✓ Automate environment control inside storage area – temperature, air quality, CO2 levels, HVAC systems and dust
- ✓ Maintain storage and regulatory compliance with smart storage monitoring
- ✓ Get notifications for environment parameter breaches
